Here you will learn all about the features of GBWhatsApp and download links to Android devices. The GBWhatsApp mod allows users of the basic WhatsApp app to enjoy much more flexibility, authority and control over their accounts. This is a problem they could be facing with their traditional app model, but this mod comes to make it all better. Some of the user-focused features of GBWhatsApp are, but are not limited to: File sharing – WhatsApp allows you to share about 10 images at the same time, and there are even restrictions on the file size of videos and documents that can be shared with the service. Using GBWhatsApp, users can share up to 100 images at the same time and can send video files as large as 50MB at once. Audio files as large as 100MB can also be shared with outhit contacts at once without compression of any kind. Scheduler – Birthdays, meeting reminders, broadcasts, and other important messages can be scheduled in advance. This saves you the hassle of forgetting and struggling to send a message when it's too late. Anti-revocation messages – Don't worry about people deleting messages after sending them to you anymore. With this feature, you get to read all deleted messages as if they were still there. Privacy – GBWhatsApp is also great in privacy, ensuring that users can remove the status last seen, prevent others from knowing when they checked their status, remove the second tick (delivered) and hide the blue dot in the recordings that were heard. Unlike traditional WhatsApp though, you can still see them from other contacts.
